

# Pranam Chand

## Data Analyst

Odisha, India | [pranamchand@gmail.com](mailto:pranamchand@gmail.com) | +91 637 128 8280 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Kaggle](#)

## SUMMARY

---

A Data Science student with expertise in Data analysis and Data Modelling. Actively looking for internship opportunities where I can contribute to the company and can gain practical knowledge.

## PROJECTS

---

- [Apple\\_Global\\_Retail\\_Analytics: Python, SQL, Power BI](#)
  - Modelled a 5-table relational schema and ER diagram for a synthetic Apple retail dataset spanning 1M+ transactions, 89 products, and 19 countries.
  - Performed EDA in Python (Pandas, Seaborn) on pricing, revenue distribution, and 30K+ warranty records to uncover product and category trends.
  - Wrote 11 SQL queries using window functions and CASE logic to analyse MoM revenue growth, store concentration, and warranty claim rates.
  - Built a Power BI dashboard visualising \$6B in revenue and 6M units sold across global stores and categories.
  - Translated raw business questions into structured, data-driven answers end-to-end.
- [Basic Sentiment Analysis: Python, ML, EDA: App](#)
  - Built a multi-class NLP emotion classification system using Python, Pandas, NumPy, and scikit-learn.
  - Developed an end-to-end pipeline covering text preprocessing, feature extraction, model training, and evaluation for 6 emotion classes.
  - Implemented real-time prediction for Joy, Sadness, Love, Anger, Fear, and Surprise from user-provided text.
  - Deployed the trained model as an interactive Streamlit web application, Pickle serialisation for reusable inference.
- [Book\\_Recommendation\\_System: Python, ML: App](#)
  - Built a content-based recommendation engine using Python, Pandas, and scikit-learn with TF-IDF + cosine similarity.
  - Preprocessed book metadata using duplicate removal, text normalisation, and title + author feature engineering.
  - Implemented Top-10 recommendations with ranked similarity scores, author details, and average ratings.
  - Added RapidFuzz typo-tolerant search, O(1) title-index lookup, and Joblib for efficient and reusable inference.
- [Kaggle Competitions](#)
  - Participated in 4 Kaggle "Getting Started" competitions, completing end-to-end ML pipelines from EDA and feature engineering to model evaluation and leaderboard submission.
  - Analysed 3,059,194+ training records across NLP, tabular classification, image classification, and time-series forecasting, exploring 12+ ML approaches and running 2+ GridSearchCV tuning experiments.
  - Achieved Kaggle leaderboard ranks of #628 (Disaster Tweets), #1733 (Spaceship Titanic), #667 (MNIST), and #1022 (Store Sales) across 4 competition submissions.
  - Built a CNN for MNIST using 28×28 image tensors, 2 Conv2D + MaxPooling blocks, dropout, and softmax, achieving 98.60% validation accuracy after 5 epochs.
  - Applied TF-IDF/NLP classification to 7,613 disaster tweets, tabular classification to 8,693 passengers, and time-series regression on 3,000,888 sales records, benchmarking and tuning models based on task-specific metrics.
- [EDA and Data Cleaning](#)
  - [Customer\\_churn\\_EDA](#) • [Anime\\_Data\\_Analysis](#) • [US\\_Accident\\_EDA\\_Project](#)

## SKILLS and TOOLS

---

- Language: Python, Java, SQL, R
- Data Analysis: Pandas, NumPy, Excel, Google Sheets
- Machine Learning: [Scikit-learn](#), [Regression](#), Classification, Clustering, [Model\\_Evaluation](#)
- Visualisation: Matplotlib, Excel Charts, [Power\\_BI](#)
- Concepts: Data Cleaning, EDA, Feature Engineering, Feature Selection, Data Preprocessing
- AI Tools: ChatGPT, Gemini, Claude, NotebookLM, Gamma, Antigravity

## EDUCATION

---

BSc **Data Science**

**Ravenshaw University**, Cuttack, Odisha

**July 2025 – 2029**
