Data Science and AI/ML

Odisha, India | pranamchand@gmail.com | +91 637 128 8280 | [Linkedin](#) | [GitHub](#) | [Portfolio](#) | [Kaggle](#)

SUMMARY

An AI/ML Enthusiast and a Data Science student with experience in Data analysis and Data Modelling. Actively looking for internship opportunities where I can contribute in any way and gain practical knowledge.

EDUCATION

BSc Data Science

Ravenshaw University, Cuttack, Odisha

July 2025 – 2029

SKILLS and TOOLS

- Language: Python, Java, SQL, R
- Data Analysis: Pandas, NumPy, Excel
- Machine Learning: [Scikit-learn](#), [Regression](#), Classification, Clustering, [Model_Evaluation](#)
- Visualisation: Matplotlib, Excel Charts, [Power_BI](#)
- Concepts: Data Cleaning, EDA, Feature Engineering, Feature Selection, Data Preprocessing

PROJECTS

- [Heart Disease Risk Assessment ML Project \(Demo\)](#)
Heart Disease Risk Prediction web app built with Streamlit and implemented a Machine Learning Algorithm, providing real-time risk assessment based on clinical health parameters.
This project uses patient health parameters such as age, blood pressure, cholesterol levels, heart rate, and other medical indicators to predict the likelihood of heart disease.
- [Basic Sentiment Analysis \(Demo\)](#)
Build and deploy a Machine Learning-based Sentiment Analysis model that predicts the basic emotional sentiment of a given text. The model analyses user input and classifies it into different sentiment categories based on the text content.
The application was built using a machine learning model with limited data, so it may be inaccurate at times and should be considered for educational and demonstration purposes only.
- [Movie Recommendation System using NLP-TF-IDF \(Demo Video\)](#)
A Natural Language Processing (NLP) powered recommendation system that suggests movies based on semantic similarity using TF-IDF Vectorisation and Cosine Similarity.
Instead of relying on user ratings or watch history, this engine reads a movie's actual DNA — its genre, tagline, and plot overview – to find films with similar thematic fingerprints.
- [Disaster_Tweet_Classification \(Demo\)](#)
Built an NLP-based machine learning application to classify disaster-related tweets using TF-IDF vectorisation and Logistic Regression. Developed an interactive Streamlit web app for real-time predictions and deployed it on Streamlit Cloud. This project is part of a **Kaggle** competition I participated in, and I later built the UI.
- EDA and Data Cleaning
 - [Customer_churn_EDA](#) • [Anime_Data_Analysis](#) • [US_Accident_EDA_Project](#)

Language

• English • Hindi • Odia

Hobbies

• Video editing • Photography • Travelling
